(54) PRESSURE-PROOF MAT

(57) Abstract:

PROBLEM TO BE SOLVED: To provide a pressure-proof mat in which an upper plate can stably and effectively support a load exerted thereon, while it compresses a supporter and a filling member, is depressed and deformed.

SOLUTION: A pressure-proof chamber 6 composed of a space is formed by superposing a flexible upper plate 2 on a bottom plate 3 and tightly closing an outer periphery. A plurality of supporters 5 having elasticity for holding the space in the pressure-proof chamber 6 are provided. Thus, a pressure-proof mat is formed, which is filled with liquid which does not prevent the flexibility of the upper plate 2 or a filling member 7 such as a non-fluid having a restoration capability to deformation.

LEGAL STATUS

[Date of request for examination] 26. 12. 2002

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]

[Patent number]

[Date of registration]

[Number of appeal against examiner's decision of rejection]

[Date of requesting appeal against examiner's decision of rejection]

[Date of extinction of right]
